

ERFcheck

Enterprise Reconciliation Framework

ERFcheck is a software that allows the implementation of all types of reconciliations and helps to identify inconsistencies in different transactions or workflows.

ERFcheck allows the inclusion of all types of reconciliations always adapting to the customer's needs, accepting any formats or reconciliation's rules as well as market standards. The user will have a unique, simple, brand new and WEB front-end.

Furthermore, reconciliations works on low-cost platforms with a great scalability to manage either low or high volumes of data.

ERFcheck has been developed by RiskMS, the first Spanish RegTech in the world.
